OFFICE ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- Group I, claims 1 38, 51 and 52, drawn to peptide products; IPC8 classes A61K 38/06, A61P 9/06 and C07K 5/00.
- Group II, claims 39 46 and 53 55, drawn to methods of modulating gap junctional communication in a population of cells; IPC8 classes A61K 38/04, A61P 9/06 and C07K 5/00.
- 2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: peptides described in Groups I (formula I or II), are disclosed by Seki et al. (1990) "Delta-acetyl-L-ornithyl-beta-alanine methyl ester hydrochloride, an intermolecule type sweetener," Agric. Biol. Chem. 54(7):1811-1818. (see Tables V and VI of the reference). Specifically, delta-X-Orn-beta-Ala (in which X is chosen from benzoyl, salicilyl, o-Cl-benzoyl, o-NO2-benzoyl) and H-Orn(Bzl)-beta-Ala are both described in the general structures claimed by the applicant.

The above-described groups appear to have a general inventive concept of peptides for modulating gap-junctions, however, the above-cited references teach these peptides. The lack of unity is based on applying those prior art records that would be or are encompassed under the breadth of the compounds as disclosed in claims 1 and 8. Because these prior art references teach the peptides that create the general inventive concept, and because the peptides of Groups I and II are not a contribution over the art, there is no general inventive concept due to the lack of the same or corresponding special technical feature.

Page 3

4. This application contains claims directed to the following patentably distinct species: the peptides represented by formulas I and II, claimed in claims 1 and 8, respectively. The species are independent or distinct because they have distinct chemical structures and thus have distinct functional characteristics, effects and fields of search that would be burdensome to the examiner.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, the gap junction modulating peptides are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Page 4

5. This application contains claims directed to the following patentably distinct species: diseases or medical conditions including arrhythmia and those diseases and conditions recited in claim 44. The species are independent or distinct because the diseases or conditions have distinct causes, symptoms and etiologies and can not be expected to necessarily occur in the same or coinciding patient populations and as such comprise separate, non-overlapping fields of search that would be burdensome to the examiner.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, the gap junction modulating peptides are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations

Art Unit: 1654

of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Inventorship

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Rejoinder

7. The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product

Page 6

claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder**. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hugh P. Young whose telephone number is (571)-272-4988. The examiner can normally be reached on 8:00 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cecilia Tsang can be reached on 571-272-0562. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
